

Paul Charbonnet
Founding Partner

Mr. Charbonnet is well-known in the computerized investing community. His 1968 degree is in biology and early work involved computerized simulation of living, growing, natural systems.

He created Investors FastTrack in 1989 after his communication software was sold to 3Comm in 1988. FT4Web has been a leading investment software program for more than 20-years, and is used by thousands of professional and individual subscribers worldwide. FastTrack provides:

- * quality, daily, dividend-adjusted fund & stock data.
- * simple, easy to understand investing strategies.
- * unique, mind-opening approach to investment software.

The Presentation - A Proof of Concepts

- * Wealth has neither been created nor destroyed. It has just moved around over the past 24 years.
- * To "beat the market", the first step is to understand how "markets" (there are many) grow and change. The next step is dynamic diversification across changing markets. There is always a bull market somewhere.
- * Equity, hard asset, and bond investors who are willing to trade monthly or quarterly can easily achieve annualized return 5-10% above the market with less risk than buy and holding or market timing.

What you can expect to learn

The common wisdom is that an expert must have devoted 10,000 hours to his subject. As of 2012, Paul is at 49,000 hours, not counting overtime.

"You must rotate your money by periodically trading (4-12 times per year). It does not require investing in individual stocks, futures, or options. All can be done with a diversified portfolio of ETFs and mutual funds with minimum cost, risk, and effort."

"Making money in the market since the 9/1/2000 market top has been extraordinarily easy."

"You cannot harvest a crop if you start with cheap, low quality seed. Nothing comes out right when your data starts out wrong."

The presentation uses FastTrack software, but is not a FastTrack training session in any sense. Paul focuses on the current market situation and investment strategies which can be followed with or without computer software.
